Identity, history and description

Attributions are separate from verified information. The material is not certified.

Identity

'98 HTCC SSH Bx1 / Relic Seeds. The identity described here refers to the combination of name and breeder in the source, not to authentication of a physical sample.

Description

'98 HTCC SSH Bx1 retains a reference to the Super Silver Haze material that Relic Seeds associates with the 1998 HTCC. The breeder describes crossing it with a Relic Super Silver Haze male, whose reported ancestry is 1998 SSH × SSH F3. Bx1 denotes the backcross; F3 belongs to a component of the parental line, not to this record's generation. [S1]

The account mentions guava, citrus, eucalyptus and pine, alongside medium-to-large stature. These are attributed observations, without a terpene analysis or authenticated HHH specimen. The database's mostly-indica classification is retained as published, without inferring a different ratio from the Haze name.

History and origin

Relic Seeds connects the project to 1998 SSH material and a later derived line. The source supplies no physical chain of custody for HHH. [S1]

Recorded lineage

Super Silver Haze (1998) × Relic Super Silver Haze [S1]. Parentage attributed to the source, not independently validated genetics.
